Job Description

Developer

-

1 Overview

1.1 Corporate LinX

Corporate LinX, a financial software development company, was founded 7 years ago in France and opened offices in the UK 5 years ago. Our expertise lies in Supply Chain Finance, assisting large international corporates in their trading relationships with their suppliers more specifically around invoice management and their subsequent payment. The Corporate LinX eXchange (CLeX) software permits full automated and paperless transactions between buyers and vendors. Our services are extending to consulting, software development and implementation. To guarantee funding for our clients' supply chains, the company holds close relations with top financial organisations also using the CLeX Portal for the funding of transactions in the Supply Chain.

Wishing to rapidly expand its team, Corporate LinX is looking to recruit developers, a position that offers a great opportunity to influence the direction and success of the company.

1.2 Role Description

Job Title: Developer/Junior Developer

Reporting to: Dean Randle – Technical Manager

Job Outline: ASP.net Developer, Financial Web Application

This Role is for a Developer and a Junior Developer looking to support and extend an existing web portal application. The successful applicant will invest long term in the company and products. The environment is one of support and encouragement to learn, grow, and contribute to the on-going quality and direction of the software tools we develop.

1.3 Skills, Knowledge and Experience:

- Key technologies:
 - ASP.Net
 - C#
 - .Net Framework 4
 - SQL Server
 - MS Visual Studio, Source Safe, etc.
 - XML
- Important technologies:
 - XSLT
 - Javascript (and JQuery)
 - LIBIGen
 - PDF creation
- Key Experience:

Corporate LinX Job Description

Developer

Saved: 1-Jun-15

- Developing public facing web applications
- Development & use of Unit Tests
- Desirable Experience:
 - Working in a small team
 - Agile and Scrum development methodology
 - Working in Finance, AR, AP, purchasing environments, especially in an e-commerce context
 - Hardware and network support and maintenance
 - NANT
 - Mercurial
 - Relevant Degree

2 Key Tasks

- Coding of systems against an approved Design, ensuring quality is maintained and design issues/concerns are raised as early as possible.
- Design technical solutions to functional requirements maintaining the context of the portal within the design.
- Design Review and Code Review
- Pro-actively seek to improve internal processes, standards, and documentation
- Assist the Technical Author where necessary to ensure the accuracy and completeness of documentation
- Work with the test team to apply and automate testing to capture defects as early as possible

3 Personal Attributes:

The Role requires working closely with a small but dynamic team. Team chemistry will be as important as skills. As a member of this team you will be expected to become familiar with all parts and technologies of the application and to gain skills to enable support and extension of the application.

A key focus has been development of a solid architecture and contributions to the design and implementation of this architecture are welcomed and expected.

As part of a small team the opportunity to influence the culture and processes is great and the successful person will contribute positively to this.

Whilst running projects with clients, there may be requirements to contact and or meet with some of their respective technical teams.
